

# BFN Event Solution Frequently Asked Questions

V1.0

Date: 09/11/2020

## What is the BFN Event Module?

The BFN Event Module is an extension for Microsoft Dynamics 365 Business Central. It supports you to set up events for your company und sell those to end customers.

## Which type of events can I create?

There are three event types you can create:

The calendar-based event takes place on specified times the customer can visit. This can be for example a tour in a museum. You also can set up a maximum quantity of visitors who can visit those events.

The single event allows the visitor to access your location once. You can set up validity for this ticket. So, a visitor e.g. can access until one year after buying the ticket.

The permanent event allows your customer to visit your location as often as possible during a specified time period starting when the customers buys the ticket.

With our additional tools for access management you have most control about the accesses of your customers.

## How many events can I create in trial version?

For each type of event you can create one event beside the demo events.

## How do I create Sales Invoices?

You can use our Shop Sales Order Page, which has an easy tool to select an event. It automatically creates sales lines and post them. In Shop Sales Order page you can also select events by scanning the GTIN code of the article. In fact, creating invoices is faster than in the standard solution.

## Which other extensions can I use with BFN Event Module?

Because of our great experience in event business we developed many extensions which extends your whole business.

Our Touch POS Solution supports your cashiers to sell your articles in a modern way.

To have most control for your location, we developed an ACS System which runs on every operating system.

To reach more customers you can consume our Shopware Connector, which connects your Shopware based online shop to Business Central.
